## Carbon Monoxide Detectors

Carbon monoxide (CO) can be a silent killer in the home. You may have a CO detector, but all CO detectors have a limited life to protect you and yours may have stopped working. This new carbon monoxide detector lets you know there's a problem before reaching dangerous, even deadly CO levels, long before the other detectors even begin to work. Ask us for more information on this LOW-LEVEL Carbon Monoxide Monitor.

## Registers & Grilles

High quality registers and grilles are engineered to deliver the maximum air flow into the room and are designed to mix the air properly within the room, creating increased comfort by eliminating hot or cold spots and greatly reducing the air noise level.

## Duct Smoke Detector

The Pro 3 Duct smoke detector kit is the latest innovation for early detection of smoke and products of combustion present in air moving through HVAC ducts.

Add this inexpensive life saving tool to every furnace and help protect your most valuable asset, your family.

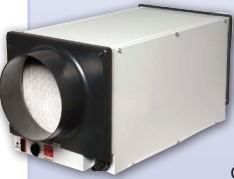

## Humidifiers

Heating your home dries out the air. This causes you to feel colder which means you turn up the heat, using more energy. Proper humidity is also the key to staying healthy in the winter. Keeping your sinuses and airways moist help reduce the potential for bacteria and viruses to enter your body. Whole home humidifiers help you achieve the proper humidity levels in your home, eliminate irritations and annoyances of excessively dry air, and provide maximum comfort throughout your entire home.

## Dehumidifiers

High humidity is a perfect environment for all sorts of pathogens leading to a variety of ailments including asthma, allergies and a variety of respiratory infections. A central dehumidifier works with your central air conditioner to help alleviate these potential conditions and to provide complete humidity control while maintaining an optimum home temperature. Lower humidity will also make you feel comfortable at higher temperatures, thus reducing your energy consumption.

## Trane CleanEffects™

Installed as part of your home's heating and cooling system, they clean the air by pulling it from every room, filtering it, and sending clean air back to your home. You'd have to put a portable air cleaner in every room to match that kind of performance. Air cleaners also trap airborne contaminants down to .1 micron, including allergy causing pollen and mold spores. They also keep dust and dirt from reaching your heating and cooling equipment, allowing it to perform at peak efficiency. We have Electronic Media, and for extreme needs HEPA filtration systems.

## Trane Energy Recovery Ventilators

When a home is well sealed, it is very energy efficient, but a new problem arises – it becomes like a plastic bag. What is inside stays inside, including pollutants that we DON'T want. To solve this problem, the home needs to be ventilated. This is where an ERV comes into effect.

# Protect Your Health

*Exceptional service. Exceptional value.*

GOOD  BETTER  BEST

# Protect Your Wallet!

## Energy Savings Agreements

By becoming a Preventive Maintenance Agreement (PMA) customer you will be placed on a maintenance schedule in our computer systems. You may choose an annual service, a semi-annual service, or more frequent services throughout the year. We will call you to let you know when it is time to service your heating and cooling system. You will not have to worry about a thing; we will take care of everything. You will be entitled to a 10% discount on services, including parts and labor. You will also receive the same low rate for services conducted after hours, on weekends, and holidays. The cost to become a PMA customer is FREE and will cover you for a lifetime. Please sign up today and save tomorrow!

## Programmable Thermostats

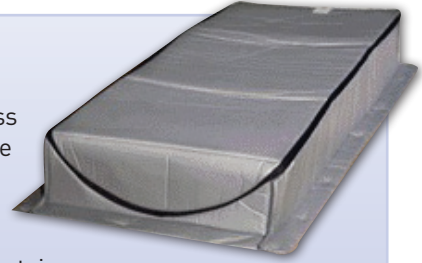

Programmable thermostats save energy and deliver precise comfort control by automatically keeping your home at the temperature you choose. Your system runs less when you're not home, but brings the temperature back to your desired level before you return.

Our touch screen thermostats have large numbers and easy-to-read displays.

## Attic Tent

The Ultimate Attic Access Cover. Your pull-down staircase is a point of air transfer / loss.

This durable insulated cover creates an airtight barrier that fits standard folding attic stair sizes. It is a practical and economical solution to a problem that has existed since homes were built with overhead attic entries. That problem is wasted energy through and around the attic door and stairs.

## Surge Protectors

The SPK1 Surge Arrestors are designed to dissipate the damaging effects of momentary voltage spikes or other transient power surges including impulses from lightning. They are not warranted against direct lightning, continuous over voltage, over current, or dropped neutrals.

Installed on both the indoor and outdoor units to full protect the full heating and A/C system and comes with a limited lifetime warranty against manufacturing defects and a \$1000 per occurrence policy coverage.

## Flood & Ceiling Protection

Reduce your fears of ceiling damage from an overflowing air handler or furnace. We offer two lines of defense.

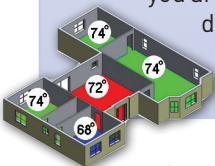

First is an E-Z Trap in-line float switch that detects blocked condensate drain and trap.

Second is an overflow sensor on your pan that will shut the system down in case of an emergency.

## Zoning

Do temperatures vary dramatically from one part of your home to the next? Is it next to impossible to keep every room in the house at a comfortable temperature? The sensible answer is a zone controlled package. A thermostat located in each zone gives you control of the temperature settings for that zone. The temperature in your home can be comfortable no matter where you are in your home. A zone system saves you money by directing heated or cooled air to the areas where it's needed. So you're not wasting energy heating or cooling zones that are already comfortable.

## New Equipment

Our new systems are extremely efficient (translation, you will use less energy that will reflect on your utility bills.) New equipment can also make a dramatic difference in your comfort... and they are very quiet.

Ask our representative about a free, no obligation estimate.
